

The strong system partner for the future

Product range 2019 / 2020

Quality - Partnership - Economy

Basic care in our health systems is an important pillar for the functioning of our society. We are a manufacturer and system supplier of medical consumables and consider ourselves a partner and service provider for basic care in all medical institutions. Quality, innovation and beneficial care options motivate us each day to make a small and yet significant contribution to modern and future oriented healthcare. The employees of Meditrade GmbH are dedicated to this core principle and fulfil these demanding tasks competently and professionally to achieve a higher health standard.

Your Meditrade Team

Meditrade – The strong system partner for the future

Meditrade has been successful in the market for decades as the manufacturer of the highest quality risk protection products. By purchasing the 90 year old company Karl Beese in 2010, we expanded into the sector of high quality bandages

and incontinence products. We build on our expert knowledge and constantly develop new products so that we are always able to offer the best professional solution with the maximum efficiency.

Our product range

- Gloves
- Masks, hoods and surgical clothing
- Dressings, bandages and plasters
- Individual sets and surgical requirements
- Incontinence
- Disinfection and care
- Hygiene, cleaning and cleaning products
- Ward and patient requirements

Your demands - Our motivation

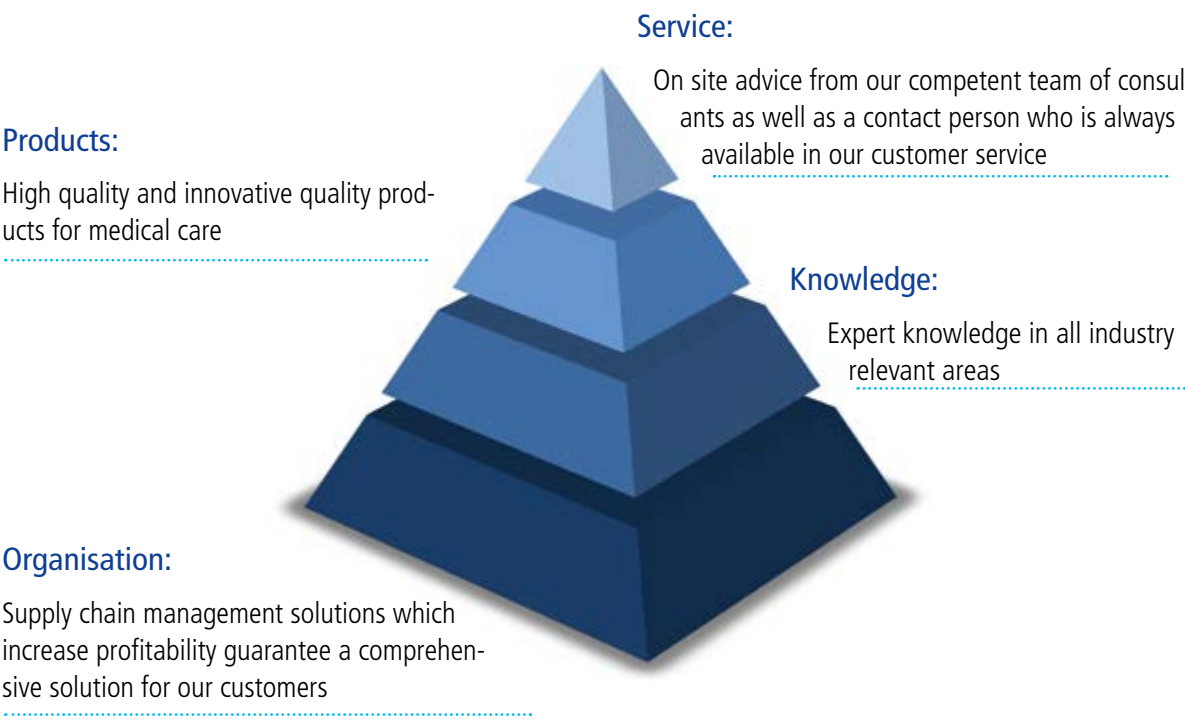

We work with two logistics centres which enable us to cover the increased system partnership requirements. South (Kiefersfelden) and North (Neuenkirchen / Hamburg). State-of-the-art logistics processes are constantly adapted to the latest customer requirements.

Good advice - more important than ever

Meditrade is a manufacturer and system partner for the complete supply of medical devices and services to hospitals and clinic-related facilities.

Our core competences

Complex needs assessment - How to

Comprehensive supply coupled with a tailor-made needs assessment is still the greatest challenge for cost effective procurement.

Thanks to our high standards and proximity to the market, we have extensive knowledge that enables us to provide suitable products for your specific applications across the whole system and to optimise them further for you.

Gentle Skin® Aloecare™

Our latex glove with aloe vera coating

Characteristics

- examination glove made of latex according to DIN EN 455
- with aloe vera containing inner coating
- skin friendly: powder-free, very low in proteins and low in accelerators
- best fitting
- micro-roughened for sensitive and excellent tactile sensation
- highly elastic and tear resistant
- ambidextrous fit / excellent fit

Application

Especially for users whose hands are additionally stressed by daily work with medical gloves over several hours and by regular use of disinfectants containing alcohol.

Aloe Vera inner coating - for the sake of your hands

The special inner coating has proven to offer the following advantages for users and especially stressed skin:

- cools
- moisturises
- noticeably relieves the typical itching and burning on rough and chapped skin
- contains more than 200 biologically active substances, including the following properties: anti-inflammatory, wound healing, anti-arthritis, analgesic

Medical glove (according to DIN EN 455) and PPE (Personal protective equipment) tested according to EN 374. (Protection against dangerous chemicals and micro-organisms). Suitable for cleaning agents and disinfection and ideal for other applications in the laboratory, in the pharmaceutical industry, for professional cleaning, in catering and for handling food in general. Ideal for users with sensitive skin with diagnosed latex allergy (Type I).

Nitril® 3000 x-long blue

Our extra long nitrile glove

Characteristics

- examination glove made of nitrile according to DIN EN 455
- protective glove according to PPE
- with extra long shaft (about 29 cm) for optimum protection
- skin friendly: powder, protein and latex-free, low in accelerators
- best fitting
- micro-roughened for sensitive and excellent tactile sensation
- highly elastic and tear resistant
- ambidextrous fitting / excellent fit
- suitable for contact with food

L	1282L	100 pcs	10 boxes	00400857
XL	1282XL	100 pcs	10 boxes	00400834

Application

Due to its extra-long shaft, this glove not only provides reliable (spray) protection for the hands, but also for the forearms when handling irritating fluids. Therefore, it is ideal for handling chemicals, cytostatics, detergents and disinfectants. It is also used in the laboratory, the pharmaceutical industry and in catering. Ideal for latex allergy sufferers with diagnosed type I allergy.

Nitril® black

Our black nitrile examination and protective glove

Characteristics

The Nitril® black is a latex-free disposable glove made of nitrile butadiene rubber (NBR). The material is not only very durable, but also adapts to the hand after a short time feeling like a second skin and thus guarantees fatigue-free working. The polymer inner coating makes it easy to put them on. Ambidextrous, with rolled edge, black, powder-free, micro-roughened, non-sterile, for single use.

Application

Medical glove (according to DIN EN 455) and PPE (Personal Protective Equipment) tested according to EN 374 (protection against chemicals and micro-organisms). Suitable for cleaning agents and disinfection and for other applications in the laboratory, in the pharmaceutical industry, for professional cleaning, in catering and for handling food in general. Nitril® Magenta

Our eye-catcher with caring silk sericin coating

Characteristics

The Nitril® Magenta is a latex-free examination protective glove made of nitrile butadiene rubber (NBR). The patented inner coating cares for the hands and makes them easy and effort-less to put on. Ambidextrous, with rolled edge, pink, powder-free, micro-rough, non-sterile, for single use.

Application

Medical glove (according to DIN EN 455) and PPE (Personal protective equipment) tested according to EN 374 (protection against hazardous chemicals and micro-organisms). Ideal for cosmetic sectors. Suitable for handling cleaning agents and disinfectants, for applications in the laboratory, in the pharmaceutical industry, in catering and for handling food in general.

Silk sericin coating - for the sake of your hands

The special interior coating has proven to offer the following advantages for the user and particularly stressed skin:

- anti-aging effect
- natural humidification
- antimicrobial
- UV protection
- reduces redness, irritation and skin damage
- promotes wound healing
- collagen enrichment
- hydrating effect
- nourishes dry and sensitive skin
- firming effect

non-sterile

Vinyl 2000

Our disposable vinyl examination glove

Characteristics

The Vinyl 2000 is a latex-free examination glove which thanks to its soft consistency and high tactile sensitivity is very popular among users. As a latex replacement, vinyl is ideal for users and patients with diagnosed latex (type I) and accelerator allergy (type IV). Ambidextrous, with rolled edge, non-sterile, for single use.

Application

Suitable for daily care of the elderly in nursing homes and hospitals, in private practice, in the nursing field in general and for handling non-fatty foods. Ideal for use in industrial environments. Due to its high functionality and its economic advantages it can be used where the consumption of disposable gloves is very high.

Vinyl 2000 Stretch PF

Our highly elastic vinyl examination glove

Characteristics

The Vinyl 2000 Stretch PF has significantly better elasticity and density compared to traditional vinyl gloves, providing the user safer work for daily needs. As a latex substitute, vinyl is ideal for users and patients with diagnosed Latex-(type I) and accelerator allergy (type IV). Ambidextrous, with rolled edge, powder-free, non-sterile, for single use.

Application

The reasonably priced latex-free and comfortable alternative for care. Ideal for use in industrial environments. Due to its high functionality and its economic advantages it can be used where the consumption of disposable gloves is very high.

Cotton gloves

Our soft glove made of pure cotton

Characteristics

- glove made of pure cotton
- skin friendly protection for the hands
- permeable to air
- hard wearing due to firmly processed seams
- anatomical fit

Application

Ideal for the dermatological sector, especially when treated with very oily or slow absorbing ointments, e.g. in atopic dermatitis, very dry skin or dermatitis and to cover gauze dressings (do not use directly on open wounds!). Also suitable for the reprocessing of cleaned surgical instruments. They protect the instruments from the natural acidity and fat content of the hands.

Froggy™

Our hygiene glove made of soft polyethylene

Characteristics

- transparent hygienic glove made of PE
- skin friendly: powder, protein and latex-free
- in practical glove dispenser for easy removal
- stable welded
- tear resistant due to firm hems on the sides
- ambidextrous
- in women's and men's size

non-sterile

Size	REF	Box contents	Shipping unit	PZN
Women	1192S	100 pcs	100 boxes	06177745
Men	1192L	100 pcs	100 boxes	06177751

Application

For economical use in simple activities. Perfect for protecting hands against rough external soiling and for all areas requiring sanitary standards. Ideal for chemists, supermarkets, bakeries, the food industry and petrol stations. **WARNING:** Only suitable for single use when fuelling the car with diesel fuel. Short term protection against minor, superficial diesel pollution (this PE disposable glove is not Personal protective equipment (PPE) under Regulation (EU) 2016/425).

Élastify®

Our low cost hygienic glove made of super tear resistant TPE

Characteristics

- transparent hygienic glove made of TPE (thermoplastic elastomer), powder-free
- skin friendly: free of plasticizers (phthalates), proteins and latex
- in practical glove dispenser for easy removal
- breathable and pleasant wearing comfort due to special material composition
- stable and extremely tear resistant
- ambidextrous suitable
- for single use
- suitable for contact with food

non-sterile

Copolymed®

Our sterile copolymer examination glove

Characteristics

- sterile examination glove made of copolymer
- skin friendly: powder, protein and latex-free
- good tactile sensation
- tear resistant
- ambidextrous fitting / excellent fit
- punched on paper

Application

Ideal for short medical interventions, for sterile activities in the daily work of surgical areas and wards, as well as in industry. Performs the function of an under and over glove when additional dirt and liquid protection is required. Suitable for allergy sufferers with diagnosed type I and / or type IV allergy.

Our surgical gloves set standards in terms of protection and safety

In operations, the protection of medical personnel and patients comes first. The Meditrade surgical glove range includes a diverse selection of different glove models made of different materials, all of which are characterised by mechanical strength, tightness, grip, comfort and biocompatibility. The gloves are continuously optimised in their properties and further developed to meet the highest demands in the market.

Reference™ OP

The powdered latex surgical glove

Characteristics

The Reference™ OP is a powdered surgical glove made of a highly adaptable and very stretchable latex structure with optimum grip and micro-roughening, which gives the glove a very high comfort and, especially at the fingertips - a sensitive tactile sensation. The optimum fit allows long term users in the operative field to work fatigue free for several hours. The light powder coating guarantees that the gloves can be put on and taken off with ease. Sterile, powdered, micro-roughened, anatomically shaped, with rolled edge, for single use.

Application

Surgical glove (according to DIN EN 455) and PPE (Personal protective equipment) tested according to EN 374 (protection against hazardous chemicals and micro-organisms). Suitable in all surgical areas with sterile requirements and wherever the user moves in a sterile environment and detects a risk of contamination. Ideal for highly infectious situations in hospitals, in private practice, in laboratories or in the pharmaceutical industry. Also suitable for double-gloving.

Gentle Skin® Premium OP™

The premium quality latex surgical glove

Characteristics

The Gentle Skin® Premium OP™ is a surgical glove made of a highly adaptable and very stretchable latex structure with optimum grip and micro-roughening, which gives the glove a very high comfort and, especially at the fingertips - a sensitive tactile sensation. The special polymer coating forms an additional barrier between skin and latex and noticeably improves putting on. The easy handling and excellent product quality to increase the feeling of safety considerably, make the Gentle Skin® Premium OP™ rightly one of the most popular powder-free surgical gloves on the market. Sterile, powder-free, micro-roughened, anatomically shaped, with rolled edge, for single use.

Application

Surgical glove (according to DIN EN 455) and PPE (Personal protective equipment) tested according to EN 374 (protection against hazardous chemicals and micro-organisms). Particularly suitable for vascular surgery, orthopaedics, abdominal surgery and in all surgical areas with sterile requirements. Wherever the user works in a sterile environment and detects a risk of contamination. Ideal for all highly infectious situations in hospitals, in private practice, in laboratories or in the pharmaceutical industry. Also suitable for double-gloving.

Gentle Skin® Smooth OP

The latex surgical glove with a smooth texture

Characteristics

The Gentle Skin® Smooth OP is a surgical glove with a very supple and stretchy latex structure, which gives the glove a very high wearing comfort and sensitive tactile sensation. The mentioned properties coupled with the anatomical fit guarantee the user fatigue-free and safe work in the surgical daily routine. The special polymer coating forms an additional barrier between skin and latex and noticeably improves their putting on. Very good grip for safe instrument operation. Sterile, powder-free, anatomically shaped, with rolled edge, for single use.

Application

Surgical glove (according to DIN EN 455) and PPE (Personal protective equipment) tested according to EN 374 (protection against hazardous chemicals and micro-organisms). Particularly suitable for vascular surgery, orthopaedics, abdominal surgery and in all surgical areas with sterile requirements. Gentle Skin® Micro OP®

The touch sensitive latex surgical glove

Characteristics

The Gentle Skin® Micro OP® was specially developed for fine surgical applications. It has optimum touch sensitivity and is slightly thinner when compared to other surgical gloves. Despite the thinner wall thickness, the highest level of safety is guaranteed by the fulfilment of all standards and norms. The colour and the exceptionally good fit of the glove allow fatigue-free working, especially in the field of ophthalmology. Sterile, powder-free, micro-roughened, anatomically shaped, with rolled edge, for single use.

Application

Surgical glove (according to DIN EN 455) and PPE (Personal protective equipment) tested according to EN 374 (protection against hazardous chemicals and micro-organisms). Surgical glove for the highest demands in areas where particularly sensitive tactile sensation is required. Therefore particularly suitable for use in micro-surgery, neurology and ophthalmology. Generally in all surgical areas with sterile requirements and wherever the user moves in a sterile environment and recognizes a risk of contamination. Ideal for all highly infectious situations in hospitals, in private practice, in

laboratories or in the pharmaceutical industry. Also suitable for double-gloving.

Gentle Skin® Securitex® OP

The surgical latex glove set with indicator function

Characteristics

The Gentle Skin®-Securitex® set consists of 2 pairs of surgical gloves with indicator function and is therefore ideal for surgical procedures. The special colour indicator function and the reliable fluid indication of our glove set offer double safety for the user. The inner glove has a striking green signal colour meaning the surgeon is immediately warned if the outer glove is damaged. If the damage is not visible to the naked eye, the special liquid indication offers additional security. As: If the glove is damaged and gets in contact with liquid of any kind, the perforated area will immediately turn deep green. The outer glove is a bit thicker, to minimise the risk of such damage in advance. It is brownish to bring out the indicator function as effectively as possible by means of high contrast. Sterile, powder-free, micro-roughened, anatomically shaped, with rolled edge, for single use.

Application

Surgical glove (according to DIN EN 455) and PPE (Personal protective equipment) tested according to EN 374 (protection against hazardous chemicals and micro-organisms). Ideally suited for surgical and highly infectious interventions in which a particularly high level of protection is required, in hospitals, in private practice, in laboratories or in the pharmaceutical industry. Ideal for all sterile requiring surgical areas and wherever the user moves in a sterile environment and detects a risk of contamination.

Gentle Skin® Isopretex® OP

The latex-free surgical glove made of fine polyisoprene

Characteristics

The Gentle Skin® Isopretex® OP is a latex-free surgical glove made of synthetic rubber. This glove is similar in quality to a powder-free latex surgical glove and offers an excellent alternative for latex allergy sufferers. A special formula gives the user an incredibly high degree of flexibility, softness and comfort. The properties mentioned coupled with the anatomical fit guarantee the user fatigue-free and safe work in the day to day of the operating theatre. Its outstanding elasticity, suppleness and perfectly balanced grip make the Gentle Skin® Isopretex® OP the perfect glove for lengthy procedures. A unique inner coating guarantees perfect putting on, both in dry and wet conditions. Sterile, powder-free, micro-roughened, anatomically shaped, with rolled edge, for single use.

Application

Surgical glove (according to DIN EN 455) and PPE (Personal protective equipment) tested according to EN 374 (protection against hazardous chemicals and micro-organisms). Due to its latex-free composition especially suitable for emergency and rescue services and especially for the health care of children. Generally in all surgical areas with sterile requirements and wherever the user moves in a sterile environment and detects a risk of contamination. Ideal for all highly infectious situations in hospitals, in private practice, in laboratories or in

the pharmaceutical industry. Also suitable for double-gloving.

Neopretex® OP

The latex-free surgical glove made of flexible polychloroprene

Characteristics

The Neopretex® OP is a latex-free surgical glove made of polychloroprene, also known as Neoprene. Due to its properties as an "artificial substitute" for natural rubber latex, its highly elastic formula makes it a suitable alternative for latexallergysufferers. The material is not only very durable, but also adapts to the hand after a short time feeling like a second skin and thus guarantees fatigue-free working. Sterile, powder-free, micro-roughened, anatomically shaped, with rolled edge, for single use.

Application

Surgical glove (according to DIN EN 455) and PPE (Personal protective equipment) tested according to EN 374 (protection against hazardous chemicals and micro-organisms). As they are latex-free, they are especially suitable for emergency and rescue services and above all for the health care of children. Generally in all surgical areas with sterile requirements and wherever the user works in a sterile environment and detects a risk of contamination. Ideal for all highly infectious situations in hospitals, in private practice, in laboratories or in the pharmaceutical industry.

Also suitable for double-gloving.

Finessis® Aegis®

Reactive protection

**Trauma & high risk
Orthopaedics**

FLEXYLON™ | Without accelerators | Synthetic surgical gloves

Aegis® is a revolutionary protective system. It is a surgical glove equipped with a reaction initiated sterilisation system. The Finessis® Aegis® was designed inside the glove with an anti-microbial layer made from high performance elastomers between the sleeve. The disinfection system will only come into effect IF the glove has been PERFORATED. In this case, the activated gel is released in the APPROPRIATE QUANTITY and at the LOCATION where the perforation originated.

Special features:

- Reaction-initiated sterilisation system
- WITHOUT accelerators
- Antimicrobial interlayer that releases activated gel in case of perforation
- Best AQL in the sector (AQL = 0.10)
- Made from FLEXYLON™ (layer technology)
- High electrical resistance
- Low stress thanks to optimum anatomical fit

More safety in the operating theatre and on the ward

With our products, we make an important contribution to preventing infection paths and germ transfer. Personnel, patients and visitors should feel safe and comfortable in dealing with each other. Wearing comfort, breathability and individual adjustment are important aspects of contemporary and suitable clothing.

Especially within the field of PPE (Personal protective equipment) it is not enough to rely on industry standardised products, but rather high standards of medical quality must be maintained.

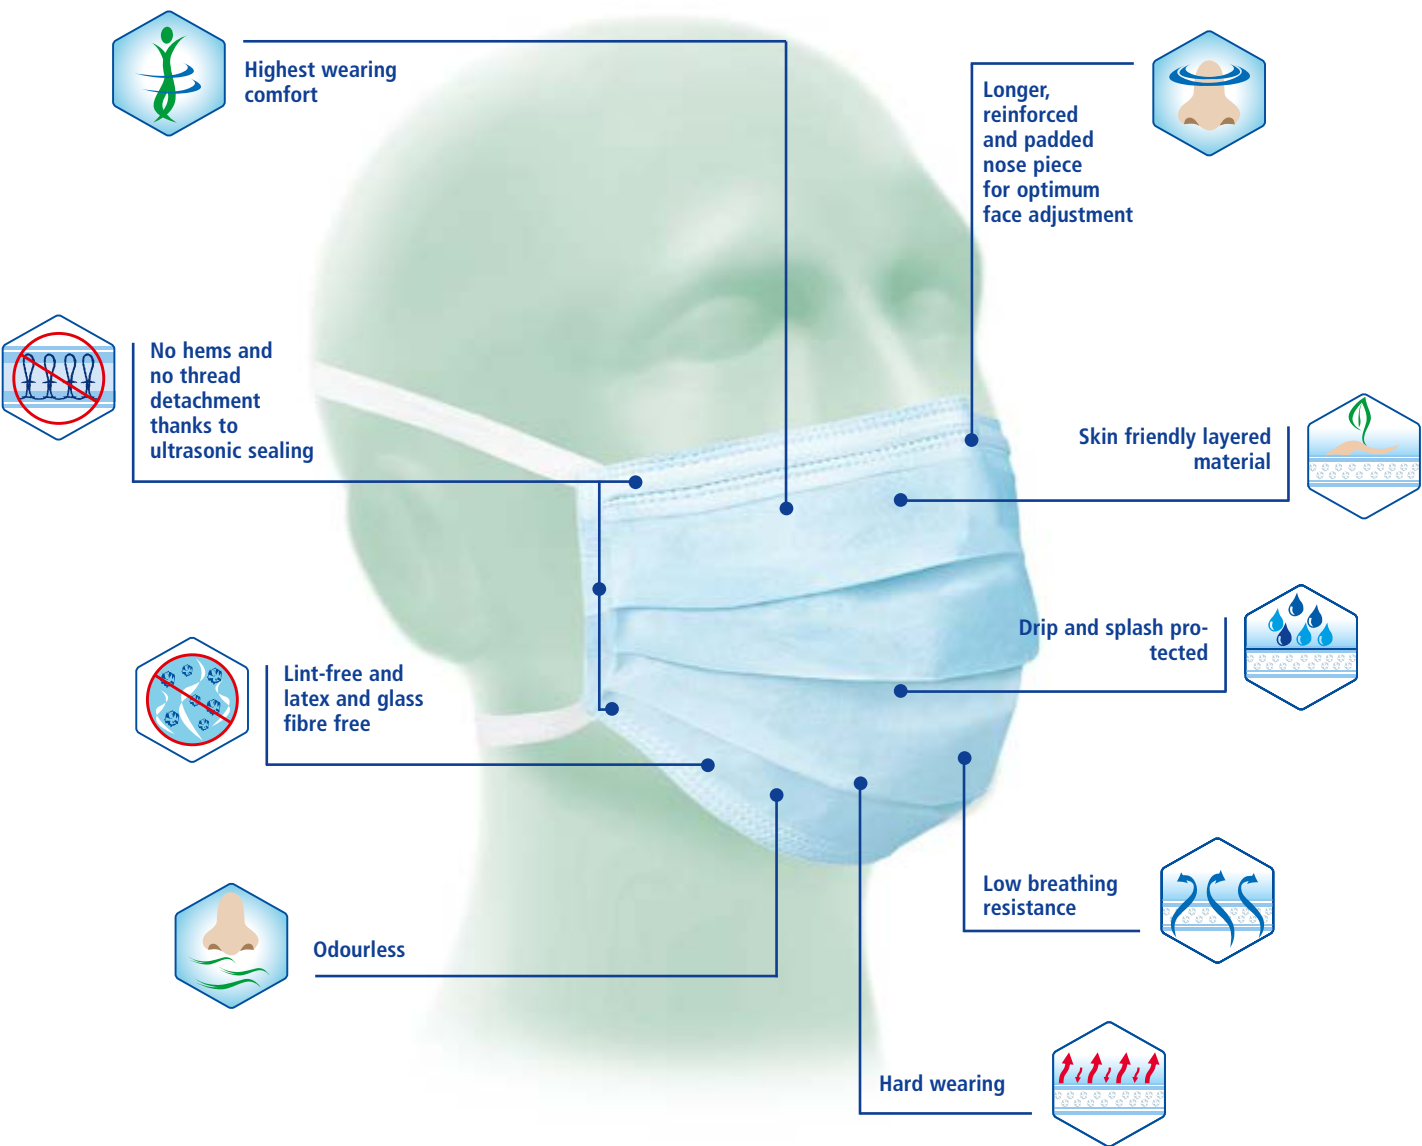

For example, when making Suavel face masks, we use the method of Ultrasonic sealing to avoid any separation of the thread.

We always use materials that define the current state of the art, and therefore are consistently able to offer the best product.

More safety in the operating theatre and on the ward

Suavel® Protec Plus Suavel® Protec

Characteristics of all Suavel® surgical masks

Our high filtration surgical mask with elastic ear loops

Characteristics

- surgical mask according to EN 14683, type II
- bacterial filter efficiency $\geq 99\%$
- 3 ply
- elastic ear loops
- green
- for single use

Application

For standard and long term applications and all applications in the operating theatre and on the ward for the protection of users and patients. Guaranteed high wearing comfort even with prolonged use.

non-sterile

BeeSana®

SMS gown 40 g

Maximum protection
Protective gown for extra protection against
liquids and particles

Characteristics
Protective gown made of 3 ply, soft SMS composite material. The combined layers guarantee a high barrier against liquids, germs and light chemical splashes. The gown is also opaque, lint-free, tear resistant and breathable at the same time for optimum comfort. Neck and waist fastening bands as well as jersey cuffs as sleeve ends, non-sterile, for single use.

The BeeSana® SMS gown 40 g was successfully tested for its resistance to germ penetration in moist conditions (based on DIN EN ISO 22610) and in dry conditions (based on DIN EN ISO 22612) and on its virus impermeability (according to DIN EN 14126) and is thus perfectly suitable for handling MRSA or noroviruses.

Application
Ideal for highly infectious situations. To protect against germs in emergency and isolation wards as well as in the care of the elderly and in the hospital for personnel, patients and visitors.

non-sterile

Wound treatment and dressings - the supporting pillars of medical care

Our claim is always to offer the optimum product for the respective wound or the current wound state, since a wound dressing alone can not fulfil all therapeutic requirements.

These include all non-sterile and sterile gauze and non-woven swabs as well as suction and ointment swabs. In the field of therapeutic dressings, we have all application relevant products to be able to offer the right product for compressing, supporting and relieving.

To provide even greater patient safety in the surgical area all our sterile products are equipped with the highest safety standards. Whether it be woven X-ray contrast strips, counting control cards or the highest quality control with proof of tracking from the procurement of raw materials to the finished product in double peel packaging.

BeeSana® Lap sponge x-ray thread

Our lap sponge in many variants

Characteristics

- pre-washed abdominal gauze made of medical gauze acc. EN 14079
- with X-ray contrast chip
- 20 thread
- soft and extremely absorbent
- specified formats: Measurements BEFORE washing

Application

For absorbing and stopping blood and body fluids during surgical procedures.
For a variety of purposes, the abdominal dressings are available in different sizes, layers and colours.

ABE® drainal

Our slit hole compress with metal liner coating

Characteristics

- non-woven slit swab with hole
- soft and absorbent non-woven layer
- gentle on skin and wound friendly
- metallic coating prevents sticking to the wound, allowing a painless dressing change
- hole diameter: approx. 5.5 - 11 mm

Application

For external wound care in small calibre drains and infusion catheters. Apply metal coating to the skin.

sterile, pack of 1

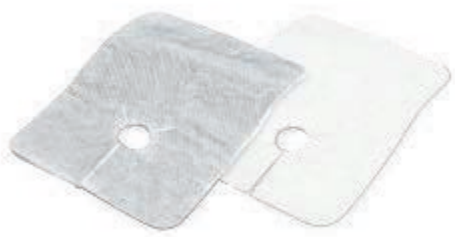

REF	Size	Box contents	Shipping unit	PZN
4118	6 x 7 cm	50 x 1 pcs	6 boxes	01333867

ABE® tracheal

Slit hole compress with metal coating

Characteristics

- non-woven material swabs, slit with hole
- soft and absorbent non-woven layer
- gentle on skin and wound friendly
- metallic coating prevents sticking to the wound, allowing a painless dressing change
- latex-free, DEHP and PVC
- sterile packed
- hole diameter: approx. 13 - 30 mm

Application

Slit hole compress for the treatment of catheters, stomata and drainage. The hole in the swab is also slit, thus ABE® tracheal makes a perfect fit to the drainage or stoma and the exudate can be quickly absorbed into the absorbent non-woven back. Apply metal coating to the skin.

sterile, pack of 1

BeeSana® Absorbent dressing pad

Our absorbent dressing pad for high fluid absorption

Characteristics

- wound friendly absorbent dressing pad
- absorbent core made of 100% cellulose
- completely covered with non-adhesive non-woven material
- blue top to mark the back and as a hydrophobic barrier against wetting and as a soiling protection of laundry and clothing

Application

For wound treatment of severely secretive wounds in all medical areas. Absorbent dressing pads are also ideal for padding wounds.

non-sterile, in a polybag

BeeSana® Eye pad

Our eye pad with cushioning effect

Characteristics

- oval, soft and fully sealed dressing pad
- absorbent inner filling
- liquid is passed through the polyester non-woven material directly into the interior of the pad

Application

For absorption of eye fluid. For padding and eye bandages. Warning: In the case of injuries of the external eye as well as in applications after operations, a sterile eye pad / wound covering is to be used. Due to the oval shape, this wound dressing fits the eye socket particularly well.

non-sterile

ABE[®] Tubular net bandage

Our highly elastic tubular net bandage

Characteristics

- highly elastic tubular bandage
- easy and quick handling
- can be cut at any point
- no tearing due to the binding
- seamless to avoid pressure points
- good anatomical adjustment for a wrinkle-free fit
- secure and permanent fixation, even with extreme movements

Application

For the fixation of all kinds of dressings and padding material in pressure-prone areas. Using scissors, a hole can be cut into the mesh tube to so that uninjured limbs (e.g. the thumb in a hand bandage) are outside the bandage. Particularly suitable for use on joints, conical and round body parts.

BeeSana® SafeCut

Our cohesive finger bandage

Characteristics

- adhesive and elastic conforming bandage
- non-slip due to fine latex application
- actively breathable
- water resistant and tear resistant
- stretchability approx. 100 %
- bandage is easy to tear off

Application

For the fixation of bandages of all kinds. For individual and quick first aid for finger and joint injuries as well as torn fingernails. For the fixation of wound dressings as well as a light support and compression bandage. To immobilise the injured body parts and limbs.

Product advantage: easy to tear off (no scissors necessary).

non-sterile

REF	Size	Colour	Box contents	Shipping unit	PZN
1844	2.5 cm x 4.5 m	blue	1 pcs	252 boxes	10544882

Fold the support pad (fixation possible with and without pad)

1. Take the end of the bandage and fold it over a few times until you have enough protective pad.
2. This support cushion is fixed in the intended place with the rest of the bandage, so that stability is achieved.
3. Apply the dressing and simply tear it off. Ready to go.

ABE® fix adhesion c

Our elastic and adhesive bandage, creped, individually cellophane wrapped

Characteristics

- adhesive and elastic conforming bandage
- non-slip
- breathable and skin-friendly
- elasticity: approx. 100%
- 52% polypropylene / 41% latex / 7% elastane
- Bandage is easy to tear off

Application

For the fixation of bandages of all kinds, especially joints. Excellent for all support and relief bandages.

Product advantage: easy to tear off (no scissors necessary).

non-sterile, individually wrapped in cellophane

ABE[®] extra

Our short stretch bandage for extra strong support and compression bandages

Characteristics

- particularly strong, textile elastic compression bandage
- with short stretch / elasticity approx. 80%
- extraordinarily durable bandage with permanent compression effect
- open, air-permeable structure
- extended length: 5 m
- 100 % cotton
- with bandage clips

Application

For very strong compression with high working pressure and low resting pressure. Suitable for the opposite dressing technique according to Pütter. In support of the venous valve function, after varicosclerosation, in all acute and chronic venous stasis oedema, leg ulcers and thrombophlebitis. Well suited for patients with sensitive skin.

PolyMem®

The multifunctional membrane dressing for all indications

- cleanse
- moisturizes
- absorbs
- fills

Cleansing

The continuous release of an innovative wound cleanser (F68) gently dissolves deposits and necrosis and supports the self-cleansing forces of the wound.

Moistening

PolyMem® keeps the wound bed moist. This creates an optimal wound environment for faster wound healing and reduces wound pain. PolyMem® does not adhere to the wound and can be easily removed with virtually no pain.

Absorbance

PolyMem® wicks away up to ten times its weight in exudate. It remains stable and can be removed without leaving any residue.

Fills

PolyMem® gently expands to fill and conform to the wound.

The portfolio for all requirements

Depending on the requirements, PolyMem® can be used both as a primary dressing and as a secondary dressing. It combines the requirements of a wide variety of wound dressings such as alginates, hydrocolloids etc. in a single dressing.

Clinical studies show that the PolyMem® membrane dressing provides faster wound healing compared to other dressings and has been successfully used in wounds where previous treatment was unsuccessful.

Benefits for you and your patients

Simplification of wound treatment

- PolyMem® can be used throughout the wound healing process.
- PolyMem® is suitable for all types of wounds.
- Due to its special properties, PolyMem® can be left on the wound for several days.

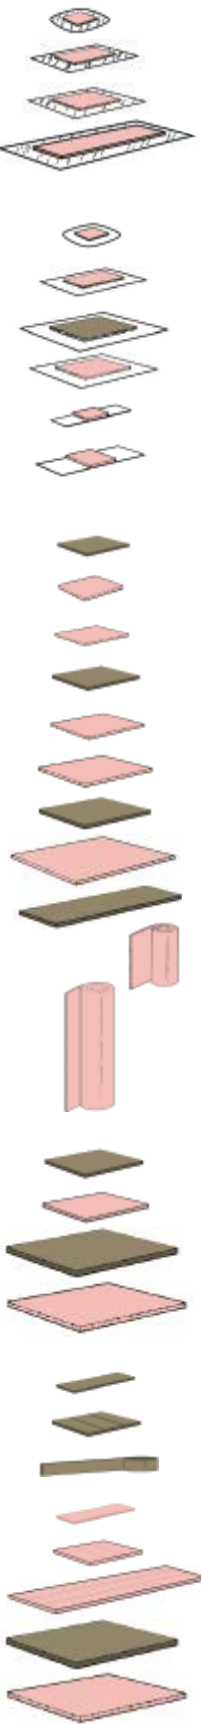

Creation of an optimal wound environment

- PolyMem® gently dissolves deposits and necrosis.
- PolyMem® absorbs excess exudate.
- PolyMem® keeps the wound bed constantly moist and reduces wound pain.

BeeSana® Sets - high efficiency for maximum individualisation

Our set solutions enable efficient and safe use on the wards and in the operating theatre. The various combinations of individual components in high quality packaging allow our customers the time saving and safe use of our products. The objective of our range is the economic application of the different individual components under the constant premise of high quality patient care. Of course, there are set solutions both as ready made standard sets as well as custom made individual sets.

Individual set solutions

The contents of each set are compiled individually according to the requirements of our customers. Together with our customers, our trained and competent sales staff develop individual solutions for the highest demands and special interventions. We also offer our customers solutions for minimum requirements. Our entire product portfolio of dressings, covers, protective clothing and other materials are the basis for this. Of course, all our sets for the surgical area are equipped with double, self-adhesive counting cards for safe documentation in the patient record. By using our sets, material usage, preparation time, waste volume and logistics costs are reduced. In addition, you ensure that all components are available for use in the optimum number. Another advantage is the exact assignment to the patient and intervention of the materials used. The use of set solutions leads to a significant optimisation of the process costs and a high level of customer profitability.

Standardised set solutions

Based on our many years of experience in the development of customised set solutions for our customers, we have been able to develop various standard sets for various procedures both in the operating theatre and on the ward. Sets especially adapted to the needs of the various operations facilitate the preparation and implementation of standard interventions and processes for our customers. The use of set solutions leads to a significant optimisation of the process costs and a high level of customer profitability.

BeeSana® Ward catheter set

Characteristics

The ward catheter set is used for hygienic intermittent catheterisation of bladders and is sterile for immediate use on the ward.

Application

For catheterisation of the bladder.

Our incontinence products are oriented towards quality of life of those affected

Today there are a whole range of conservative and surgical treatments for urinary and faecal incontinence that can cure or at least alleviate the condition. Modern incontinence products provide a pleasant solution for people suffering from incontinence who can no longer be treated. From an application point of view, it is by no means sufficient to provide nurses and patients with just any incontinence product. This is why we go to great lengths when developing and producing Meditrade incontinence products to come up with detailed solutions that also provide discretion for the user. Our broad range enables cost-effective use with a wide range of sizes, absorbency levels and qualities, always ensuring specific and acceptable patient care.

Superslip®

Anatomically shaped incontinence slip with flexible cuffs

Characteristics

Modern incontinence briefs with excellent comfort and safety thanks to elastic back fastener and double adhesive velcro closure. This allows repeated opening and closing without damaging the outer layer. The odour binding and pH skin neutral double cushion technology with super-absorber achieves high fluid absorption with constant absorption speed. Hydrophobic side cuffs as an outlet barrier as well as a wetness indicator to indicate the optimum changeover time all offer maximum protection. The soft and skin friendly inner non-woven material prevents skin irritation.

Application

For severe urinary and faecal incontinence and persons with limited mobility who have a high need of care.

Medi-Pants

Discrete disposable briefs with the highest wearing comfort

Characteristics

Incontinence briefs for protection against bladder weakness, which can be put on and taken off like normal underwear. Enables unrestricted freedom of movement and customary independence. The odour binding and fast absorbing core reliably and fluid tightly encloses liquid. Breathable, skin friendly, for women and men, for single use.

Application

To protect against bladder weakness. For mobile or people with dementia without additional restrictions in everyday life. Especially suitable for use in toilet training. Wear just like normal underwear.

New Quik

Baby nappy in premium quality

Characteristics

Baby nappies with double side leakage protection and resealable Velcro straps. An elastic back cuff provides a secure, comfortable fit and a high level of protection against moisture leakage. The super absorbent inner cushion keeps your baby's skin healthy and absorbs moisture that could otherwise cause a rash. Very skin friendly, because the ultra-soft and breathable textile outer skin of the nappy protects the delicate skin of your baby and helps to prevent skin irritation. The highly elastic side wings allow an optimum fit and very good freedom of movement. For single use.

Application

Baby nappies in all sizes for newborns to pre-school children.

Disinfection and hygiene products with a broad spectrum of action and modern ingredients

The core elements of our broad range of products reduce the risk of infection, standardize prevention methods and provide lasting skin care.

Our disinfection and cleaning products are subject to the strictest quality standards and are constantly and extensively tested. We offer thorough optimisation and cost savings in the form of hygiene designs in line with our products at our production site so that you can keep up-to-date with current hygiene standards.

Note: The recommendations for our products are based on scientific tests and are given to the best of our knowledge. Further recommendations, e.g. in terms of material compatibility, are only possible separately. Our recommendations do not exempt our customers from testing our products independently to ensure they are suitable for the intended purposes and procedures. In that regard, we can not assume any liability.

Alcoman®

The established hand disinfectant,
RKI-listed in section A (limited virucidal, exposure time 30 sec.)

Characteristics

Acts fast and extensively. Aldehyde- and phenol-free formula. VAH-certified.

Application

Hygienic and surgical hand disinfection. Suitable for all areas with high requirements for hand hygiene in clinics, practices, ambulances, care facilities as well as industry and laboratory areas. For hygienic hand disinfection: rub in at least 3 ml for 30 seconds. Keep hands moist throughout the complete application. For surgical hand disinfection: thoroughly moisten dry hands and forearms with Alcoman®. Repeat as necessary to keep hands and forearms moist for at least 5 minutes. Always read the label and package leaflet before use.

Spectrum of efficacy

Bactericidal, fungicidal, limited virucidal and therefore effective against all enveloped viruses. Effective against Rota and Noro Viruses as wells as MRSA.

Stability

Keep container tightly closed, do not use after the expiry date.
No special storage conditions.

Alcoman, Solution for hand disinfection

Ind.: Hygienic and surgical hand disinfection. **Contraind.:** Alcoman® is not suitable for disinfecting open wounds. **Warnings:** Flammable. Keep away from sources of ignition. Do not bring into contact with open flames. The exposure times are minimum times. Depending on the additional complications the exposure times must be prolonged. Alcoman® does not kill spores and is therefore not suitable for storing sterile instruments and syringes. Refer to the package leaflet for further information. **Date of last revision:** 10/2018.

Refer to the package leaflet for risks and side effects and consult your doctor or pharmacist.

Ingredients

100 g solution contain:
2-Propanol 63,1g;
Purified water 36,9 g.

Alcoman® +

The proven hand disinfectant as a biocide

Characteristics

Ready-to-use, highly effective alcohol based antiseptic for hygienic and surgical hand disinfection. Very good skin compatibility. Especially suitable for frequent applications. Dermatologically tested. Acts quickly and thoroughly.

Application

For hygienic hand disinfection: Rub portions of 3 ml on hands to keep them moist for 30 seconds. For surgical hand disinfection: thoroughly moisten dry hands and forearms with Alcoman® +. Repeat if necessary to keep hands and forearms moist for at least 5 minutes. It should be noted that all finger gaps, fingernails and skin folds are also completely wetted over the entire exposure time.

Spectrum of action

Comprehensively effective against bacteria and yeasts. Bactericidal, fungicidal, tuberculocidal, virucidal and therefore completely effective against all enveloped viruses (BVDV/HCV/vaccinia incl. HBV/HIV). Effective against rota virus and noro virus and MRSA. Effective against Adeno in 2 minutes.

Shelf life

Alcoman® + can be used for up to 12 months after opening the original container for the first time. The products must only be stored in the original sealed container, contamination must be avoided while removing product, and the products must be kept and stored in accordance with standard storage conditions (protected from damp, direct sunlight, heat and frost) at a temperature of between 5 and 25°C.

Regulatory requirements

Alcoman® + is not a medicinal product and is covered by the Biocidal Products Directive. Biocide safe use. Always read the label and product information before use. VAH listed. Biocide of Product type 1 ("Biocidal Products for Human Hygiene") Biocide Reg. No. N-44236.

Contents

Composition (included in 100 g): 70 ml of 2-propanol

Alcoman® Gel

Our hand disinfection in handy gel version

Product type

Alcoman®Gel is a ready-to-use gel based alcoholic rub-in preparation for hygienic hand disinfection. The application is carried out without the addition of water. Ideal for travelling.

Preparation properties

- acts quickly and thoroughly in 30 seconds.
- thoroughly effective against bacteria and yeast fungi
- limited virucidal against all enveloped viruses (including BVDV / HCV / HBV / HIV, vaccinia and Noro viruses (MNV))
- evaluated according to the standard methods of DGHM and DIN EN 1500 as well as the RKI recommendations on effectiveness against viruses
- without colourings
- very good skin compatibility even with frequent use
- VAH listed

Applications

For all areas with increased demands on hand hygiene: Clinics, medical practices, ambulances, care facilities, industrial, commercial and laboratory areas, leisure and bathing facilities. Ideal for mobile activities.

Type and duration of application

Ready to use. For hygienic hand disinfection according to DIN EN 1500 min. 3 ml for 30 sec. Thoroughly rub in undiluted and without adding water. Avoid weak spots.

Regulatory requirements

Biocide of Product type 1 ("Biocidal products for human hygiene"). Use disinfectant with care. Always read the label and product information before use.

Shelf life

Alcoman®Gel can be used up to 12 months after the first opening of the original container. The products must only be stored in the original sealed container, contamination must be avoided while removing product, and the products must be kept and stored in accordance with standard storage conditions (protected from damp, direct sunlight, heat and frost) between 5 - 25 ° C.

Alcoderm®

Skin disinfection

Characteristics

Acts fast and extensively. Aldehyde- and phenol-free formula. VAH-certified.

Application

For disinfection before simple injections and punctures of peripheral vessels, the skin is carefully rubbed off with the solution and kept moist for 15 seconds. For cooling poultices Alcoderm® should be diluted with equal parts of water. Note: Alcoderm® does not kill spores and is therefore not suitable for storing sterile instruments and syringes. Always read the label and package leaflet before use.

Spectrum of efficacy

Bactericidal, fungicidal, limited virucidal (including rotavirus and norovirus).

Stability

Keep container tightly closed, do not use after the expiry date. No special storage conditions.

Ingredients

100 g solution contain: 2-Propanol 63,1 g; Purified water 36,9 g.

Dosing pump

Alcoderm, Solution for skin disinfection

Ind.: Skin disinfection before simple injections and punctures of peripheral vessels. Cooling poultices. **Contraind.:** Alcoderm® is not suitable for disinfecting open wounds. **Warnings:** Flammable. Keep away from sources of ignition. Do not bring into contact with open flames. The exposure times are minimum times. Depending on the additional complications the exposure times must be prolonged. Alcoderm® does not kill spores and is therefore not suitable for storing sterile instruments and syringes. Further information see package leaflet. **Date of last revision:** 10/2018.

Refer to the package leaflet for risks and side effects and consult your doctor or pharmacist.

Ethasept®

Our alcoholic hand sanitizer for personal hygiene

Product properties:

Ethasept® is a very quick and comprehensive, ready to use, skin-friendly hand disinfectant **without perfumes and colourings**, which is perfect for hygienic hand disinfection. **Regenerating agents** soften the skin. Skin compatibility is confirmed by dermatological tests.

Areas of application:

For hygienic and surgical hand disinfection for all areas of human hygiene with high demands on hand hygiene: Clinics, medical practices, ambulances, care facilities, industrial and laboratory areas.

Type and duration of application:

Ready to use. Keep hands / forearms moist during application. Observe standard methods for hygienic (EN 1500) and surgical (EN 12791) hand disinfection.

Preparation properties:

- acts very quickly and thoroughly as a bactericide, yeasticide, tuberculocide
- very quick and effective against all enveloped virus (incl. BVDV / HCV / HBV / HIV and Vaccinia).
- thoroughly effective against the non-enveloped viruses rota, adeno, polio and noro virus (virucidal effective according to EN 14476)
- effective against MRSA
- perfume and colouring-free
- very good skin compatibility - Dermatologically tested by: "very good"
- also examined for skin disinfection
- evaluated according to the standard methods of DGHM, EN 1500 and EN 12791 as well as the RKI recommendations for efficacy against viruses
- VAH listed
- IHO listed

Hygienic hand disinfection:

Reduction of transient germs in 15 sec. Rub in undiluted hands with at least 3 ml.

Surgical hand disinfection:

Reduction of transient and resident germs: 3 ml portions on hands for 90 sec. rub to keep hands moist during this exposure time.

Medizid® AF

Our universal, aldehyde-free surface disinfectant concentrate

Product properties and application areas

Liquid surface wipe disinfectant concentrate for the disinfection and cleaning of non-invasive medical devices and medical inventory as well as all wipe-resistant (upper) surfaces of medical devices. Ideal for areas with high levels of dirt and odour.

Application notes

Medizid® AF is a concentrate! Pay attention to application concentrations and exposure time. Completely wet surfaces. Use dosing aids. Note dosing instructions. After contact with food contact surfaces, clean product residues with clean water after exposure time. Use biocides safely. Always read the label and product information before use. Biocide of product types PT 2 and PT 4. Biocidal reg no.: N-71965. Limit the use of biocides to a minimum.

Application example

10 l of a 1% solution = 100 ml of disinfectant concentrate + 9.9 l of water. The required amount of water is obtained by subtracting from the amount of ready-to-use solution the proportion of the disinfectant concentrate used.

Shelf life

Medizid® AF can be used for up to 12 months after opening the original container for the first time. The minimum shelf life is 3 years (see label printing). The products must only be stored in the original sealed container, contamination must be avoided while removing product, and the products must be kept and stored in accordance with standard storage conditions (protected from damp, direct sunlight, heat and frost) at a temperature of between 5 and 25°C.

Composition

100g contains:

5 g didecyltrimethylammonium chloride.

Further components:

Non-ionic surfactants, synergistic additives, auxiliaries, complexing agents, fragrances.

Preparation properties

- Bactericidal, yeasticidal, tuberculocidal effects (incl. M.-terrae)
- Limited virucidal against all enveloped viruses: BVDV / Vaccinia (incl. HBV / HIV)
- Virucide effective against the non-enveloped viruses: Adeno, polyoma / SV 40 and noro viruses (FCV)
- Effective against MRSA
- Excellent cleaning properties
- No exposures to be monitored
- Very good material compatibility
- Tested according to the standard methods of the DGHM and the RKI recommendations on effectiveness against viruses
- VAH listed
- IHO listed

Application concentrations / Exposure time

Efficacies	15min.	60min.	240min.
According to VAH / DGHM:			
Bactericidal, yeasticidal	3,0 % with load	1,0 % with load	0,5 % with load
Limited virucidal acc. to RKI:			
BVDV / vaccinia (including HBV, HIV, HCV)	0,5 %	2,0 % with load

Instrusol® Enzyme

Our enzymatic instrument cleaning for endoscopy and surgery

Product type

Instrusol® Enzyme is an enzyme cleaner for the careful, residue-free cleaning of medical instruments, especially flexible and rigid endoscopes, endoscope accessories and surgical and orthopaedic instruments. Highly active enzymes, supported by an innovative surfactantsystem, eliminate deposits of blood, secretions, detritus, tissue residues and fats. Instrusol® enzyme prevents biofilms that harbour resistant bacteria and interfere with hygienic treatment. With effective, residue-free cleaning in 2-3 minutes, Instrusol® Enzyme creates the condition for a safe disinfection and sterilisation. Instrusol® Enzyme prevents coagulation, thus reducing device failures and ensuring the functionality of moving instrument parts. The excellent properties facilitate the residue-free cleaning, especially with Englumigem instruments, endoscopes and endoscopic accessories. Instrusol® Enzyme is foam-free and ideal for ultrasonic preparation. Instrusol® provides a microbial protection of the use solution by bactericidal and virus-inactivating properties and thus ensures maximum user safety.

Applications

For all areas of application in which medical instruments can be carefully, thoroughly and residue-free cleaned in the insertion process, circulation process and in the ultrasonic bath.

Application notes

The instructions for use and reprocessing guidelines of the instrument, endoscope, endoscope accessories and device manufacturers must be observed, in particular the preparatory measures for cleaning.

Composition

Proteases and specifically amylases, glycols, non-ionic surfactants, preservatives, fragrances, purified water.

REF	Box contents	Shipping unit	PZN

02004B	5 l	2 canisters	13816298

Accessories (see page 157)

Canister pump for dosing
Canister tap
Canister key

Preparation properties

- Effective even at cold water temperatures; warm water improves the cleaning effect (30° - 45° C)
- Prevents biofilms that harbour bacteria resistant to disinfectants and can cause infections
- A bactericidal and virus-inactivating component protects the handling solution contaminated with dirt
- Yeasticidal
- Instrusol® Enzyme does not replace any disinfectant

Application and dosage:

0.5 - 5% depending on the degree of soiling and the type of application. If the instrument is cleaned after each use with Instrusol® Enzyme, 1 - 3% as application concentration is sufficient. If necessary, the application concentration can be increased to 5%. The working solution can be used several times, however it must be renewed regularly. Under normal conditions, the working solution should be renewed once or twice a day. In difficult conditions and low application concentrations, renewal is recommended after each treatment.

Processing instructions

Insertion process

Manual preparation in the insertion process and ultrasonic bath: Insert instruments after use. All surfaces and cavities must be covered or filled. Thoroughly clean the instruments, observing the instructions of the instrument manufacturer. For encrustations, let Instrusol® Enzyme act and preferably use warm water. In the ultrasonic bath, observe the specified frequency and duration of cleaning. Avoid water temperatures over 45° C. Then remove the instruments and disinfect or rinse thoroughly with water, dry well and sterilise. For disinfection we recommend Instrusol® AF + or InstruPlus® forte.

Circulation procedures

Insert instruments after use. Follow the instructions of the device manufacturer.

Compatibility / stability / water quality:

Instrusol® Enzyme is compatible with the aldehyde-free instrument disinfectants Instrusol® AF +. Mixing with aldehyde-containing disinfectants generally is not useful. Mixing with anionic surfactants and amphoteric surfactants is not recommended. Instrusol® Enzyme should preferably be kept cool. Storage temperatures above room temperature and direct sunlight should be avoided. Instrusol® Enzyme is effective at all water temperatures, including cold water. Warm water accelerates the cleaning performance. The optimum temperature range is between 30 and 45° C. For the production of working solutions, drinking water quality water is required. For very hard water we recommend distilled water. For the final rinse we recommend preferably germ-free or sterile water. For the last rinse before steam sterilisation we recommend DI water or distilled water.

Chemical-thermal endoscope reprocessing

If endoscopes are processed both manually and automatically, InstruPlus® forte can be used for manual reprocessing.

Biodegradability

Instrusol® Enzyme is very biodegradable. The working solution can be disposed of with general waste water. A disturbance of the biological treatment plants is not produced. Instrusol® Enzyme is not classified as environmentally hazardous according to EC Directives. Shelf life after opening: 6 months

Medizid® Rapid Optima

Our ready-to-use spray wipe disinfectant for cleaning and disinfecting alcohol resistant surfaces of medical devices

Product type

Medizid® Rapid Optima is a ready-to-use, fast acting preparation for cleaning and disinfecting alcohol resistant surfaces and objects in medical facilities. Ideal between treatments and interventions when practical exposure times are required.

Applications

For all alcohol resistant surfaces of medical devices, especially for device surfaces and objects near the patient in clinics, practices and nursing homes.

Application

Ready to use. Moisten objects and surfaces completely with Medizid® Rapid Optima, allow to dry and, if necessary, wipe with a disposable cloth. Dries quickly.

Shelf life

Medizid® Rapid Optima can be used for up to 12 months after opening the original container for the first time. The minimum shelf life is 3 years (see label printing). The products must only be stored in the original sealed container, contamination must be avoided while removing product, and the products must be kept and stored in accordance with standard storage conditions (protected from damp, direct sunlight, heat and frost) at a temperature of between 5 and 25°C.

Exposure time:

Efficacies	completely wetted
According to VAH / DGHM:	
Bactericidal, yeasticidal, tuberculocidal (including M. terrae)	1 min.
MRSA	1 min.
Limited virucidal (according to DVV):	
BVDV / vaccinia (including HBV, HCV, HIV)	30 sec.
Virus efficacies:	
Rota	30 sec.
Noroviruses	15 min.
Adeno	15 min.
Polyoma / SV 40	5 min.

Medizid® Rapid

Our fast acting, ready-to-use spray wipe disinfectant for cleaning and disinfecting alcohol resistant surfaces of medical devices

Product type

Medizid® Rapid is a ready-to-use, very fast acting preparation for cleaning and disinfecting alcohol resistant surfaces and objects in medical facilities. Ideal for rapid disinfection between treatments and procedures when very short exposure times are required.

Applications

For all alcohol resistant surfaces and objects of medical products in close to patient surroundings in clinics, surgeries, ambulances and care areas.

Application

Ready to use. Moisten objects and surfaces completely with Medizid® Rapid, allow to dry and, if necessary, wipe with a disposable cloth. Dries quickly.

Shelf life

Medizid® Rapid can be used for up to 12 months after opening the original container for the first time. The minimum shelf life is 3 years (see label printing). The products must only be stored in the original sealed container, contamination must be avoided while removing product, and the products must be kept and stored in accordance with standard storage conditions (protected from damp, direct sunlight, heat and frost) at a temperature of between 5 and 25°C.

Exposure time:

Efficacies	completely wetted
According to VAH / DGHM:	
Bactericidal, yeasticidal	15 sec.
Tuberculocide (including M. terrae)	30 sec.
MRSA / mycobactericidal	1 min.
Limited virucidal (according to DVV):	
BVDV / vaccinia (including HBV, HCV, HIV)	30 sec.
Virus efficacies:	
Rota	30 sec.
Noroviruses	3 min.

Accessories (see page 157)

- Canister tap
- Canister key
- Spray head for 1 litre bottle

Composition

100g contains:
30 g of 1-propanol, 15 g of 2-propanol
10 g of ethanol, 0.05 g of didecylmethyl ammonium propionate, 0.02 g of alkylaminoguanidine diacetate
Further components:
Fragrances, non-ionic surfactants.

Medizid® Rapid Disinfection wipes

Our ready-to-use, alcohol based hygienic wipes for disinfecting and cleaning medical device surfaces and medical device items

Medizid® Rapid disinfectant wipes are impregnated with the fast acting liquid of the alcohol based preparation Medizid® Rapid. The hygienic wipes are therefore very well suited for disinfecting and cleaning medical devices such as device surfaces and objects in the medical field and in the patient friendly environment between treatments and interventions.

Applications

For all alcohol resistant medical devices, surfaces and objects, in particular for device surfaces and objects near the patient in clinics, surgeries, ambulances and care areas.

Application and dosage

Medizid® Rapid disinfectant wipes are ready to use. The surfaces and objects to be disinfected are to be carefully wiped off with the Medizid® Rapid wipe and completely wetted. Exposure time: 60 sec. according to EN 16615 (4 field test).

Please note

Be careful with all alcohol sensitive materials!

Shelf life

The minimum shelf life of Medizid® Rapid disinfectant wipes is 3 years (see label). To prevent premature drying of the wipes, reseal the packaging / can / container immediately after use. Shelf life / expiry after opening: 28 days. The products must only be stored in the original sealed container, contamination must be avoided while removing product, and the products must be kept and stored in accordance with standard storage conditions (protected from damp, direct sunlight, heat and frost) at a temperature of between 5 and 25° C.

Composition

In 100 g of impregnation solution are included:
30 g of 1-propanol, 15 g of 2-propanol, 10 g of ethanol, 0.05 g of didecylmethylammonium propionate, 0.02 g of alkylamine guanidine diacetate.
Further components: Fragrances, non-ionic surfactants.

Product properties

- effectiveness of the impregnating solution Medizid® Rapid
- ready to use
- aldehyde-free
- very fast and comprehensively effective in 15 seconds.
- bactericidal, yeasticidal, tuberculocidal effect (including M. terrae), mycobactericidal, virus-inactivating (including HBV / HIV)
- effective against enveloped viruses: BVDV (HCV) and vaccinia according to the current recommendation of the RKI
- MRSA effective and tested (1 min)
- residue-free
- pleasant smell
- good material compatibility
- virucide effective according to 14476 (Polio / Adeno)
- noro viruses and SV 40 tested
- tested according to the 4-field test / EN 16615
- impregnating solution VAH listed
- impregnating solution IHO listed

Medizid® Alpha

Our ready-to-use spray wipe disinfectant for cleaning and disinfecting all surfaces of medical devices, especially for alcohol sensitive surfaces

Product type

Medizid® Alpha is a ready-to-use, alcohol-free and aldehyde-free disinfectant for cleaning and disinfecting all wipe resistant surfaces, especially sensitive surfaces and objects. Can also be applied as foam with appropriate spray head adjustment. Also suitable for polyacrylic glass!

Applications

For medical facilities, sanitary and bathing areas and nursing homes.

Application

Apply undiluted, completely wet surfaces and objects, leave for 1 minute. Exposure time: CONC. / 1 MINUTE.

Shelf life

Medizid® Alpha can be used for up to 12 months after opening the original container for the first time. The minimum shelf life is 3 years (see label printing). The products must only be stored in the original sealed container, contamination must be avoided while removing product, and the products must be kept and stored in accordance with standard storage conditions (protected from damp, direct sunlight, heat and frost) at a temperature of between 5 and 25° C.

Medizid® Alpha Flowpack

Our ready-to-use, alcohol-free hygienic wipes for disinfecting and cleaning surfaces and objects

Product type

Medizid® Alpha disinfectant wipes (Flowpack) are ready-to-use, aldehyde and alcohol-free hygiene wipes for cleaning and disinfecting small surfaces and objects. Ideal for use between treatments and interventions in healthcare facilities. Bactericidal, yeasticidal, virucidal effect against all enveloped viruses including HBV / HIV. Medizid® Alpha disinfectant wipes (Flowpack) are impregnated with the very fast acting liquid of non-alcohol based Medizid® Alpha.

Applications

For all surfaces and objects, in particular for device surfaces and objects near the patient in clinics, surgeries, ambulances and care areas.

Application notes

Ready to use. Completely wet objects, surfaces, allow to dry, if necessary wipe. Only use damp cloths for disinfection.

Shelf life

The minimum shelf life of Medizid® Alpha disinfectant wipes (Flowpack) is 3 years (see label). To prevent the premature drying of wipes, close the packaging immediately after use. Shelf life / expiry after opening: 28 days. The products must only be stored in the original sealed container, contamination must be avoided while removing product, and the products must be kept and stored in accordance with standard storage conditions (protected from damp, direct sunlight, heat and frost) at a temperature of between 5 and 25°C.

Composition

In 100 g of impregnation solution are included: 0.2 g Polyhexamethylene biguanide hydrochloride, 0.64 g Didecylidimethylammoniumchloride.

Product properties

- ready to use
- Fast and comprehensive, effective already after 60 seconds
- comprehensive bactericidal and yeasticidal effect
- effective against all enveloped viruses: BVDV / Vaccinia (incl. HCV / HBV / HIV)
- effective against non-enveloped viruses: Rota, Polyoma / SV40
- pleasant smell
- very good material compatibility even with sensitive materials, such as acrylic glass
- 100% cellulose

Instrusol® AF +

Our fully effective, aldehyde and phenol-free instrument disinfectantfor manual reprocessing in the insertion process and in the ultrasonic cleaning device

Product type

Instrusol® AF + is suitable for the treatment of all thermostable and thermolabile instruments such as anaesthetic accessories and rigid endoscopes. An innovative formulation ensures fast, comprehensive and material saving instrument reprocessing with low application concentrations.

Applications

For all applications in which medical instruments are prepared in the insertion process and in the ultrasonic cleaning device.

Application notes

The instructions for use and reprocessing guidelines of the instrument manufacturers must be observed; in particular the instructions for the preparatory measures, for cleaning and disinfection, rinsing, drying and storage.

Application concentrations / Exposure time

Efficacies	5 min.	15 min.	30 min.	60 min.
According to VAH / DGHM:				
Bactericidal, yeasticidal, tuberculocidal (including M. terrae)		4,0 %	3,0 %	2,0 %
Limited virucidal (according to DVV): BVDV / vaccinia (including HBV, HCV, HIV)		2,0 %		
Virus efficacy:				
Adeno / Noro				4,0 %
SV 40			3,0 %	
Rota	2,0 %			
MRSA		3,0 %	2,0 %	1,0 %
Ultrasound bath	3,0 %

Composition

100g contains:
5 g of alkylidimethylethyl ammonium ethylsulfate
1 g Polyhexamethylene biguanide hydrochloride
1.8 g Coco propylene guanidinium diacetate
Further components: Surfactants, corrosion inhibitors, and suspending agents
adjuvants and pH regulators.

Preparation properties

- aldehyde and phenol-free
- comprehensively effective
- bactericidal, yeasticidal, tuberculocidal effect (including M. terrae)
- Virucide effective against all enveloped viruses: BVDV / Vaccinia incl. HBV / HIV / HCV
- Virucide effective against the non-enveloped viruses: Rota, Adeno, Polyoma (SV40), Noro
- economic
- good material compatibility
- pleasant odour, no emissions to be monitored (workplace values)
- good biological degradability
- tested according to the standard methods of the DGHM and the RKI recommendations
- VAH listed
- IHO listed

Instrusol® AF +

Our fully effective, aldehyde and phenol-free instrument disinfectant for manual reprocessing in the insertion process and in the ultrasonic cleaning device

Processing instructions

Insertion process

Insert instruments immediately after use. All surfaces and cavities must be covered or filled. Please observe the application concentrations and exposure times. Remove instruments, rinse thoroughly with water and dry.

Ultrasonic bath

The prescribed frequency range and the specified duration of disinfection must be observed. Water temperatures above 45° C should be avoided.

Preparation change

Instrusol® AF + is not compatible with aldehyde containing disinfectants. During the first use and change of the preparation, the instruments and the accessories, the tubs and preparation devices as well as the application aids must be thoroughly cleaned and rinsed.

Instrusol® AF + use solution is protein resistant and can be used several times if necessary. The working solution can be used for up to 7 days when inserting well pre-cleaned instruments. In the event of cloudiness or visible contamination, it is recommended to replace the working solution sooner.

Stability / water quality

In the production of working solutions, drinking water quality should be used. For very hard water we recommend distilled water. For the last rinse before steam sterilisation we recommend demineralised water or distilled water. For semi-critical medical devices that are not sterilised, germ-free, preferably sterile, water should be used for final rinsing.

Instrument cleaning

When adding cleaners, the working solution should be renewed daily.

Shelf life

Instrusol® AF + can be used for at least 12 months after opening the original container for the first time. The minimum shelf life is 3 years (see label printing). The products must only be stored in the original sealed container, contamination must be avoided while removing product, and the products must be kept and stored in accordance with standard storage conditions (protected from damp, direct sunlight, heat and frost) at a temperature of between 5 and 25°C.

Note

As a working solution Instrusol® AF + is not a dangerous preparation according to the Ordinance on Hazardous Substances. The working solution is not corrosive. However, we recommend that you follow the usual safety precautions when handling chemicals and wear the usual protective clothing.

InstruPlus® forte

Our highly effective instrument disinfectant with virucidal effectiveness for thermolabile and thermostable instruments.

Product type

InstruPlus® forte is an innovative aldehydic preparation based on acetals and aldehydes. InstruPlus® forte with low application concentrations is excellently compatible with materials and is particularly suitable for the treatment of very sensitive instruments, such as flexible endoscopes, endoscopic additional instruments, sensitive optics and anaesthesia accessories. The excellent material compatibility is well proven. InstruPlus® forte is suitable for manual reprocessing in the insertion process and for circulation processes in disinfection equipment. InstruPlus® forte is comprehensively assessed in accordance with the DIN EN standards for instrument disinfection, the standard methods of the DGHM and the RKI / DVV recommendations for the "Testing and declaration of disinfectants against viruses".

Applications

InstruPlus® forte is suitable for all areas in which medical instruments are processed: In the inserting and circulation process at normal water temperatures (25° C).

Application notes

The instructions for use and reprocessing instructions of the instrument, endoscope, endoscope accessory and device manufacturers must be observed, in particular the instructions for the preparatory measures, for cleaning and disinfection, for rinsing and drying as well as for storage. Semi-critical medical devices that are not disinfected or sterilised thermally (92° C - 95° C) must be treated as virucidal.

Composition

100g contains: 5.75 g formacetal, 8.0 g glutaric dialdehyde (pentanedial) Further components: Surfactants, corrosion inhibitors, preservatives, suspending agents and adjuvants as well as pH regulators.

Preparation properties

- economical due to very low application concentrations (1-3%)
- comprehensively effective
 - bactericidal, yeasticidal / fungicidal (incl. A. niger) tuberculocidal (incl. M. terrae)
 - effective against all enveloped viruses (limited virucidal), including HBV, HIV, HCV
 - effective against all non-enveloped viruses (virucidal), incl. Adeno, Polyoma / SV 40, polio
 - MRSA effective
 - excellent material compatibility
 - low exposures
 - good biological degradability
 - use solution can be used multiple times (up to 7 days)
- VAH listed
- IHO listed

Application concentrations / Exposure time:

Efficacies	15 min.	30 min.	60 min.
According to VAH / DGHM:			
Bactericidal, yeasticidal, fungicidal, tuberculocidal (including M. terrae)	1,5 %	1,0 %	1,0 %
Limited virucidal (according to DVV): BVDV / vaccinia (including HBV, HCV, HIV)	1,5 %	1,0 %	
Virucidal (according to DVV):	3,0 %		
Adeno	1,0 %		
Polyoma / SV 40	2,0 %	1,0 %	
Polio	3,0 %		
MRSA	1,5 %	1,0 %	

InstruPlus® forte use solution is protein resistant and can be used several times if necessary. The working solution can be used for up to 7 days when inserting well pre-cleaned instruments. In the event of cloudiness or visible contamination, it is recommended to replace the working solution sooner. If surfactant cleaners are used, they must only contain non-ionic surfactants and should be neutral pH formulated.

Stability / water quality

In the production of working solutions, drinking water quality should be used. For very hard drinking water we recommend distilled water. For the last rinse before steam sterilisation we recommend DI water or distilled water. For semi-critical medical devices that are not sterilised, germ-free, preferably sterile, water should be used for final rinsing.

Instrument cleaning

For the pre-cleaning of endoscopes, accessories, surgical instruments, especially narrow bore instruments. For heavy soiling we recommend the enzyme cleaner Instrusol® Enzyme. If cleaning agents are added, the working solution should be renewed daily.

Shelf life

InstruPlus® forte can be used 12 months after onset.

Biodegradability

InstruPlus® forte is readily biodegradable as an aldehyde formulated product. The working solution can be disposed of with general waste water. If properly initiated, it is unlikely that the biological treatment system will be disturbed. In accordance with OECD guidelines, InstruPlus® forte is readily biodegradable.

Processing instructions

Insertion process

Insert instruments immediately after use. All surfaces and cavities must be covered or filled. Observe the application concentrations and reaction times. Remove instruments, rinse thoroughly with water and dry.

Circulation procedure with endoscopes (disinfection devices)

The instructions of the device manufacturer must be observed, in particular the notes on dosing settings, program sequences and product changes. After disinfection, attention must be paid to sufficient final rinsing and adequate drying.

Preparation change

InstruPlus® forte is not compatible with aldehyde-free disinfectants. During initial use and when changing the specimen, thoroughly clean and rinse the instruments, accessories, baths and preparation equipment as well as the application aids. For support in the pre-cleaning we recommend Instrusol® Enzym.

Gentle Med® wash lotion

pH skin neutral and nourishing washing lotion

Characteristics

A washing lotion dermatologically tested by “very good” for daily gentle full body application especially for sensitive skin, with fresh scent of chamomile extract. Prevents the skin from drying out. Mild surfactant combination. Paraben-free Alkali-free, free of silicone and paraffin oil. Neutral skin. Economical in use due to optional dosing pump. Not tested on animals.

Application

For all areas with increased hygiene requirements in hospitals, surgeries, nursing homes or private households.

00992D	500 ml	12 bottles	11170260

Gentle Med® Skin cleansing and care foam

Gentle cleaning and care with reliable skin protection

Characteristics

Fast and gentle cleansing as well as skin care are of main importance for patients with incontinence, anus praeter and those that are bedridden. The skin cleansing care foam contains moisturising and odour binding substances. The fine pored foam offers a very good odour coverage, an excellent cleaning without irritation and leaves a fresh and nourished skin feeling. Paraben-free PEG-free. Free of silicone and paraffin oil. Without allergenic fragrances. Not tested on animals.

Application

Gentle, thorough, odour binding cleansing, especially for incontinence. For foaming, hold the can (valve) diagonally down to ensure the residue is emptied. Allow to act for a short time and absorb with disposable cloths. A nourishing and deodorising protective film remains. Shake the can vigorously before use.

REF	Box contents	Shipping unit	PZN

Our hygiene and cleaning products support you in all areas

One of the primary aims in the healthcare sector and other business facilities is achieving professional cleaning standards in all areas. We will help you achieve hygiene standards with our wide range of cleaning and hygiene products.

Note:

The recommendations for our products are based on scientific tests and are given to the best of our knowledge. Further recommendations, e.g. in terms of material compatibility, are only possible separately. Our recommendations do not exempt our customers from testing our products independently to ensure they are suitable for the intended purposes and procedures. In that regard, we can not assume any liability.

beopur WC fresh

Acidic, ready to use and viscous toilet cleaner

Characteristics

WC fresh cleaner for quick and thorough cleaning of toilets, urinals, tubs, shower cubicles and all acid resistant surfaces in sanitary areas.

Everyday products, which is why they are essential

Healthcare workflows should primarily focus on the patient. That is why we have an extensive and well thought out range of ward and patient supplies in our portfolio to meet this need on a daily basis. Whether it be using our care products and wash gloves for the daily hygiene of immobile patients, or the essentials like cotton buds, wooden tongue depressors or protective towels.

Our innovative disposable BagBath® body wash system which has proven itself millions of times to patients and nursing staff is particularly noteworthy.

BagBath® Haircare

Hair washing without water

Characteristics

Innovative hair washing system without rinsing the hair. For easy handling and higher cost efficiency. Releases any tangled hair and makes the hair easier to comb. Can be used both heated and cooled. Contains no fragrance and is therefore particularly skin friendly. Excellent for use in combination with the BagBath body wash system.

Application

Skin friendly hair washing for bedridden and people in need of care.

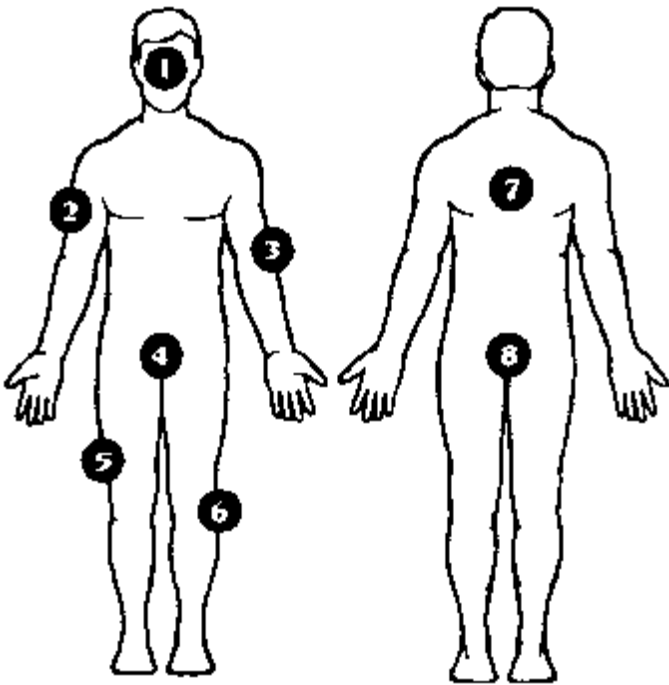

BagBath® enables hospitals and care centres to improve the quality of the skin care of their patients while saving time and money.

By applying it without soap and water, the natural acid mantle of the patient's skin is preserved and no bacterial nutrient remains on the skin due to soap residue.

Cover all body areas:

BagBath® ensures complete body hygiene. One box contains 8 cloths - one for each body region.

Special, heatable packaging:

→ Microwave + BagBath®

- Thermal diffusion ensures a deeper cleansing of the skin.
- Most patients prefer the feeling of a warm bath.
- Warmth prevents the patient from cooling down.

Special, coolable packaging:

→ Refrigerator + BagBath®

- Refreshing and cooling effect on patients in summer temperatures.
- Intensive care units can thus gently wash patients with fevers.

Easy disposal:

→ Refuse bin

As a disposable product, BagBath® can be easily and simply disposed of along with the normal household waste. When washing quarantined patients, the in-house disposal regulations must be adhered to.

BagBath®

Innovative disposable body wash system without soap and water

Characteristics

The wipes contained in BagBath® have a pleasant and very subtle fragrance. They consist of a special fabric blend that guarantees high tear resistance. Moisturising ingredients and clinically tested formulas for the ingredients ensure the skin is protected against irritation and promote its regeneration. Additional creaming is no longer necessary after use.

Application

Easy handling for the nursing staff and the patient. The box is easy to open and close, even with gloves on. No more need for wash basins, soap, water, wash cloths, towels and care lotions! Eye and mucous membrane compatible.

REF	Size	Box contents	Shipping unit	PZN
2359	25 x 20 cm	8 cloths	30 boxes	06149252

Benefits for the patient:

- Avoidance of smear infection by conventional washing utensils such as cloths and towel.
- Prevents cross-contamination by eliminating reusable laundry materials.
- Washing with BagBath® poses less risk to operated, intubated, traumatised, and immobile patients, as there is no need for additional transfer due to wet bedding.

The BagBath® cleansing wipes contain a pleasant and vitalising fragrance. They consist of a special fabric blend that guarantees high tear resistance. Moisturising ingredients and clinically tested formulas of ingredients ensure the protection of the skin from irritation and promote its regeneration. Additional creaming is no longer necessary after use.

BeeSana® Wash glove

Hygienic disposable wash glove

Characteristics

Disposable wash glove in various designs and qualities according to the individual requirements of users and patients as well as those in need of care. Maintain their dimensional stability even when wet and have impressive abrasion resistance.

Application

For skin cleansing and body care. Applicable in all nursing areas, especially nursing homes and departments at risk of infection.

Repose®

An advanced concept in the fight against decubitus and pain relief

Repose®: Prevent and treat pressure ulcers

Repose® consists of air-filled, interconnected polyurethane membranes. The polyurethane film with a thickness of 50 µ is extremely elastic: It can be stretched up to 6 times without tearing or losing its elastic properties. The combination of air with polyurethane guarantees the best possible pressure distribution by means of sinking and covering. The material is breathable, waterproof and temperature neutral. Repose® is very easy to use and can be implemented very quickly both preventively and therapeutically in all situations. With Repose®, pressure, shear forces, frictional forces and the micro-climate can be effectively controlled.

Revolutionary
Efficient
Propitious
Optimal pressure distribution
Swiftly and easy handling
Extraordinarily

Advantages:

Declining prevalence and incidence of pressure ulcers
Optimum protection in bed and on a chair
Excellent care of all patients
Cost saving
Time saving (care and logistics)
Space saving
Easy to use

Senator Hans Hermann Rösner Mautby

(Born 27 June 1917 in Beuthen, † 24 June 1999 in Oberaudorf)

For his services to the development of the clinic in Oberaudorf he was appointed as an honorary senator of the Ludwig Maximilian University of Munich. In addition, he was awarded the Federal Cross of Merit and the Bavarian Order of Merit because of his entrepreneurial spirit in health care.

SENATOR RÖSNER FOUNDATION

Touch. Help. Create opportunities.

With a comprehensive framework of action and targeted public relations work, the Senator Rösner Foundation collects funds for people who have been in financial difficulties due to cancer. In addition, the founders Peter Rösner and his wife Eveline Rösner use their foundation to support cancer research and the further education of medical professionals.

As a successor to the former "Relief organization of the Bad Trissl clinic", the Senator Rösner Foundation can now draw on more than 25 years of experience in the field of foundations.

These projects are currently being sustainably supported.

HEAT study

The Senator Rösner Foundation supports the clinical research study of Prof. Dr. med. Dipl. Biochem. Rolf D. Issels at the University of Munich Hospital with innovative approaches in the field of "pancreatic carcinoma" with several hundred thousand Euro.

We run - we help

With this slogan and under the auspices of FIS World Cup winner Felix Neureuther, the fund raising run of the Senator Rösner Foundation is held, which has now become established nationwide. Alone in 2013, the magnificent distance of 6756 km was achieved by almost 800 runners and rewarded with a record breaking donation amount of € 105,000.

The power of fast help

Cancer leaves some people in unexpected financial and social emergencies. The Senator Rösner Foundation "Living with Cancer" helps them quickly and without the red tape.

WSG Swarovski Wattens

SOS Children's villages

A trend setting aid project beyond the state borders. Thanks to an amicable connection between the Rösner family and the club president Diana Langes-Swarovski, children and adolescents are also supported by the 'SOS Kinderdörfer' beyond the development of sports to be able to cope with difficult life situations.

www.wsg-wattens-fussball.at

Competence promotion and further education

The Senator Rösner Foundation uses its proximity to all major oncology centres in Munich and Bavaria. It maintains permanent contacts with scientists and researchers and provides funding for research and development.
